Project Name: Credit Card Approval Prediction using Machine Learning	Maximum Marks: 2 Marks

CUSTOMER JOURNEY MAP TEMPLATE

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1: Discovery & Form Entry	Stage 2: Policy & ML Inference	Stage 3: Decision Rendering
Actions What does the customer do?	Applicant accesses the underwriting portal and keys in their demographic and financial attributes.	The server receives the attributes, executes policy overrides, and runs ML inference.	The applicant/underwriter views the stylized decision outcome banner and risk metrics.
Touchpoint What do they interact with?	Web browser input form interface (home.html).	Flask backend API controller (app.py) & model binaries.	Outcomes dashboard interface (result.html).
Customer Thought What is the customer thinking?	'I hope this online application is processed instantly.' 'Is my personal data secure?'	'Is the system evaluating my stability ratio fairly?'	'Why was I rejected? What rule did I breach?' 'Great! I am approved.'
Customer Feeling What is the customer feeling?	Optimistic, slightly impatient with form lengths.	Anxious, expecting instant feedback.	Confined (if rejected) or relieved (if approved).

Customer Journey Map (Continued)

Phase of Journey	Stage 1: Discovery & Form Entry	Stage 2: Policy & ML Inference	Stage 3: Decision Rendering
Process Ownership Who is in the lead?	Frontend UI Developer / Business Analyst	Lead Data Scientist / Backend Developer	Compliance Officer / Credit Admin
Opportunities How can we improve?	Implement field autocompilers (e.g., OCR of ID files) to reduce manual entries.	Integrate explainable AI modules (SHAP/LIME) to output localized contribution plots.	Provide a automated digital appeals pipeline for borderline rejected profiles.
