Project Name: Credit Card Approval Prediction using Machine Learning	Maximum Marks: 3 Marks

DEFINE PROBLEM STATEMENTS TEMPLATE

Define Problem Statements (Customer Problem Statement Template)

Create a problem statement to understand your customer's point of view. A well-articulated customer problem statement allows you and your team to find the ideal solution for your customers' challenges and empathize with them.

Problem Statement ID	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A retail credit applicant seeking rapid card issuance.	Secure a credit card for personal financial transactions.	Decisioning takes days or weeks under manual underwriting.	Manual verification of socio-economic attributes causes high latency.	Frustrated, prompting application abandonment.
PS-2	A commercial bank credit risk manager.	Minimize credit defaults and bad debt write-offs (NPAs).	Standard linear scorecards fail to capture non-linear, multi-dimensional applicant risk.	Heuristic models cannot evaluate the complex interplay of stability and income attributes.	Anxious about potential loan defaults and regulatory compliance audits.
PS-3	A senior underwriting officer.	Evaluate and screen thousands of consumer applications daily.	High application volumes lead to cognitive fatigue and underwriting errors.	Rigid rules cause borderline cases to be manually reviewed, causing a bottleneck.	Overwhelmed and pressured by operational delays.
