Project Name: Credit Card Approval Prediction using Machine Learning	Maximum Marks: 4 Marks

EMPATHY MAP TEMPLATE

Empathy Map Template

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the credit card approval underwriting bottleneck.

SAYS	THINKS
- 'I spend too much time entering data manually.' - 'It takes days to get credit reviews back.' - 'I need to justify every rejection to auditors.'	- 'Is this applicant hiding existing debts?' - 'Will automated ML models replace my role?' - 'I want a clear, interpretable score.'
DOES	FEELS
- Compares income files, assets, and credit records. - Cross-checks applicant flags against policy rules. - Manually logs rejection reasons in the database.	- Anxious about approving an applicant who defaults. - Overwhelmed by high daily application volumes. - Frustrated by slow legacy platforms.

Persona Name (Role / User Type): Sarah, Senior Credit Underwriter
